

## Gowrie Primary School, ACT

When Gowrie Primary School planned a new auditorium, there was a clear requirement for good ventilation – both during school hours and after the school is closed for the day.

Louvres were chosen for use throughout the auditorium, in a combination of glass and aluminium. Security was also of particular concern, because an important function of the louvres is a night air purge – the louvres need to be left open at night to allow warm air to escape on both the upper and lower levels of the auditorium. During the day, ventilation is also important - the auditorium is used for assemblies of almost 200 students along with other activities.

Safetyline Jalousie louvre windows were chosen due to their superior seals, quality manufacture and large width availability.

Weatherproof seals keep out harsh elements when the louvres are in a closed position, and the substantial, robust mechanics of Safetyline Jalousie make them perfect for use in high-traffic areas. The large width availability made the installation process easier and, aesthetically, the larger banks of louvres complement the overall design of the auditorium.

### Project Specifications

<b>Quantity Supplied</b>	23
<b>Height</b>	739mm - 1098mm
<b>Width</b>	1100mm - 1300mm
<b>Colour/Finish</b>	Medium Bronze anodised
<b>Louvres</b>	Aluminum - Medium Bronze anodised 6mm EnergyTech toughened glass
<b>Operation</b>	Motorised
<b>Other</b>	Flyscreens fitted
<b>Architect</b>	Enrico Taglietti
