

Chelmer, QLD

Ventilation was a key challenge in the design of this property, 7 kms west of the Brisbane CBD in the riverside suburb of Chelmer. The home's french doors and sliding windows weren't making the best use of cooling breezes coming off the Brisbane River and Safetyline Jalousie louvre windows were an ideal solution. Louvre windows provide twice as much air flow compared to regular windows and many types of doors, but can also be fully closed and feature weather-proof seals to keep rain and wind out.

French doors in the living/dining area were replaced with glass louvres creating a sleek, white finish to match the modern design of the home - inside and out. The louvres provide excellent ground floor security, whilst increasing air flow to the home.

Louvres were also installed in the property's home office, a small space that was prone to heat due to its location. Floor-to-ceiling louvres on two sides of the office now provide excellent cross ventilation, reducing the need for powered cooling methods such as fans and air conditioning.

Project Specifications

Quantity Supplied	24
Height	Varies from small windows to floor to ceiling windows
Width	800mm - 1200mm
Colour/Finish	Powder coated - Pearl White
Louvres	6mm clear toughened glass
Operation	Standard levers
Other	Flyscreens fitted
